SKUPINA ČEZ

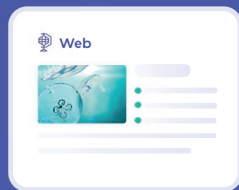

The basic building blocks of Edee.one

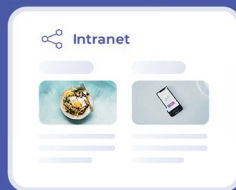

E-SHOP

A flexible e-commerce platform designed for both the B2C and B2B segments. Of course there is also a connection to third party information systems or other applications.

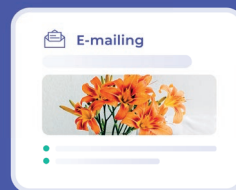

WEB

A comprehensive web-based solution suitable for both large corporate sites and simple presentations / microsites.

INTRANET

Effective communication is indispensable for teamwork, whether it is in the banking sector, an energy company, healthcare, education or even smaller companies.

E-MAILING

Email is the cornerstone of customer communication, while also being the first step towards building loyalty.

Main advantages of Edee.one

Robust scalable platform for B2C and B2B

Edee.one also adapts to the requirements of extremely large projects. It grows seamlessly with the client's business, both in terms of functionality and in the number of modules and infrastructure.

Modular solution with a connection to other systems

The basis of Edee.one is its core with basic features that can be assembled with more than 150 modules. Their deployment does not negatively affect the operation of the on-line store.

An open system for individual customizations and design

Edee.one does not put any restrictions on the client's requirements. The platform fits equally well for simple sites and for very specific e-commerce solutions.

Continuous updates and access to the source code

Trouble-free updates in line with modern trends and technologies are a matter of course when using Edee.one. These include access to new features and modules or bug fixes.

An ecosystem proven by large clients

Thanks to 20 years of experience and more than a thousand implementations of different sizes in different industries, Edee.one is a stable solution for business clients to grow with.

Edee.one is meant for companies with high requirements and high ambitions.

It delivers excellent usability, stability and performance.
