-  **Ensures a High Level of Security.**

We Designed our Proprietary Content Management System In-House

...to Give You Outstanding Tools to Create Perfect Websites

Solid Foundations

Solid content management is critical to a successful website. No bees, no honey, no hive. You bring the honey; we make the hive. Edee CMS is based on 20 years of experience creating large successful projects and 13 years of independent development.

Accessibility and Development

Edee CMS is a simple, reliable tool for managing your online business, regardless of whether you are running a website, e-shop or intranet. Edee is our proprietary product that we have continually worked to develop and improve over the years to give our customers the most highly developed tool possible. We understand how important a modern, stable platform is that you can trust. Therefore, we continue to develop Edee to ensure that the system will be available for a very long time. Furthermore, since we have developed our software in-house, we can guarantee the availability of your website.

Numerous Management Options

Do several users need access to manage your website or parts of your website? Using the rights management authorizations, you can quickly and easily decide who can make changes and what they can change. Do you want to publish a new article after normal business hours? By setting the publication time, you can complete the job during the day and let the campaign begin long after you have gone home.

CMS You Can Trust
